**THE POST-APPLICATION BASIC ASSESSMENT REPORT: ENVIRONMENTAL MANAGEMENT PROGRAMME FOR THE PROPOSED DEVELOPMENT OF A FUEL SERVICE STATION AND ASSOCIATED INFRASTRUCTURE ON PORTION 2 OF ERF 5541, EERSTE RIVER, WESTERN CAPE.**

1. The aforementioned Pre-Application Basic Assessment Report dated November 2019 and received by the Department of Environmental Affairs and Development Planning; Directorate Waste Management on 11 February 2021, refers.
2. The following comments in the Post-Application Basic Assessment Report should be noted:
  - 2.1. Date of Site photographs must be included (Appendix C) as per page 4 of 99 of the DBAR.
  - 2.2. Appendix E11 on page 29 does not include the confirmation of solid waste management services from CoCT, only water, electricity, and sewage services as per Appendix E16. The confirmation letter of solid waste management services must be included.
  - 2.3. As per the letter dated, 10 March 2021, the applicant should apply for registration as a "hazardous waste generator" with the Integrated Pollutant and Waste Information System (IPWIS), should the need for Hazardous Waste Disposal arise.
  - 2.4. Kindly note that the following contact have changed in the event of an incident. "Any emergency incident, originating at the facility, which falls within the definition of section 30(1)(a) of the National Environmental Management Act (NEMA), Act 107 of 1998, must be dealt with by the facility in accordance with Section 30 of NEMA". In the event of any incident the facility must ensure containment by the responsible person and report the incident to the DEADP (Mrs. Amina Sulaiman, 021-483 2571, [Amina.Sulaiman@westerncape.gov.za](mailto:Amina.Sulaiman@westerncape.gov.za)).

- 2.5. It is indicated on page 30 under 8.3.1 Objective 1: Rehabilitation of disturbed areas & ensure environmentally sensitive site closure that "Any contaminated soil must be collected and disposed of as hazardous waste", however due to the limited landfill airspace available it is important that the developer / owner must investigate alternative treatment methods before final disposal at a hazardous waste disposal facility.
- 2.6. On page 33, under the heading, (b) Hazardous Waste it is indicated that CFLs must be disposed, however it is important that prior to disposal the owner must identify any possible treatment technology before any disposal at a hazardous waste disposal facility.
3. Furthermore, the Directorate: Waste Management is satisfied that comments on the Post-Application Basic Assessment Report dated July 2021 have been adequately addressed.
4. The Department reserves the right to revise initial comments and request further information based on the information received.

Yours faithfully

**August Hoon**
